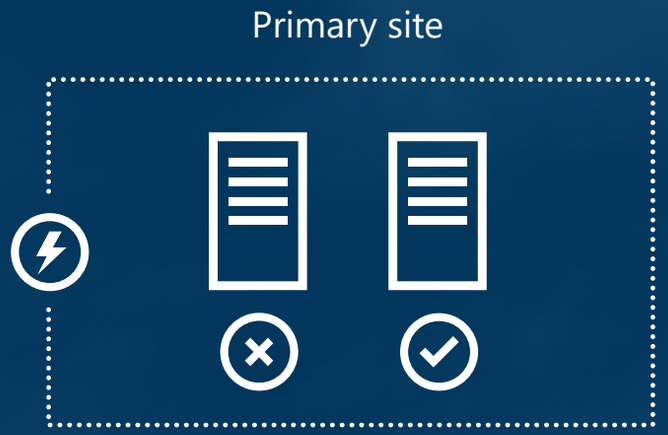
Backup and Business Continuity

“Failure is ALWAYS an option.”

Adam Savage, MythBusters

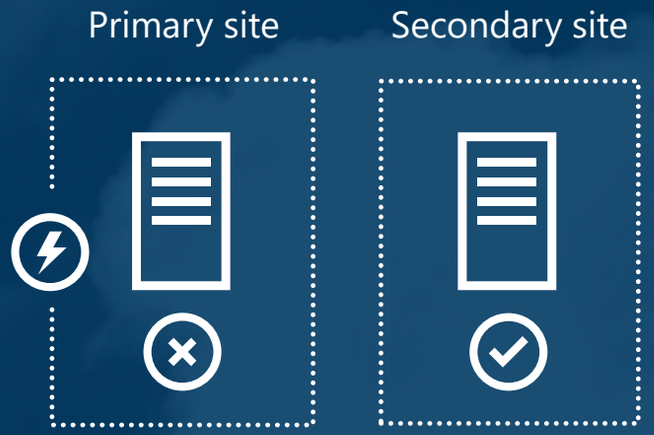
What you can do to ensure continuity

A good business continuity strategy solves for three important areas:



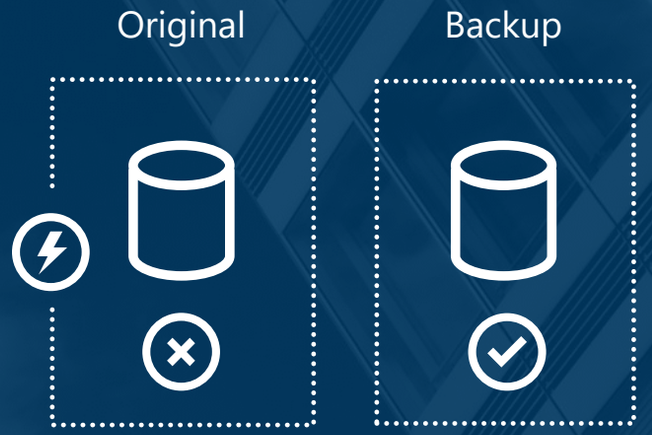
High availability

When your applications or infrastructure have failure, run a second instance in the primary site



Disaster recovery

When your primary site has failures, run your applications in secondary site



Backup

When your data is corrupted, deleted, or lost you can restore it

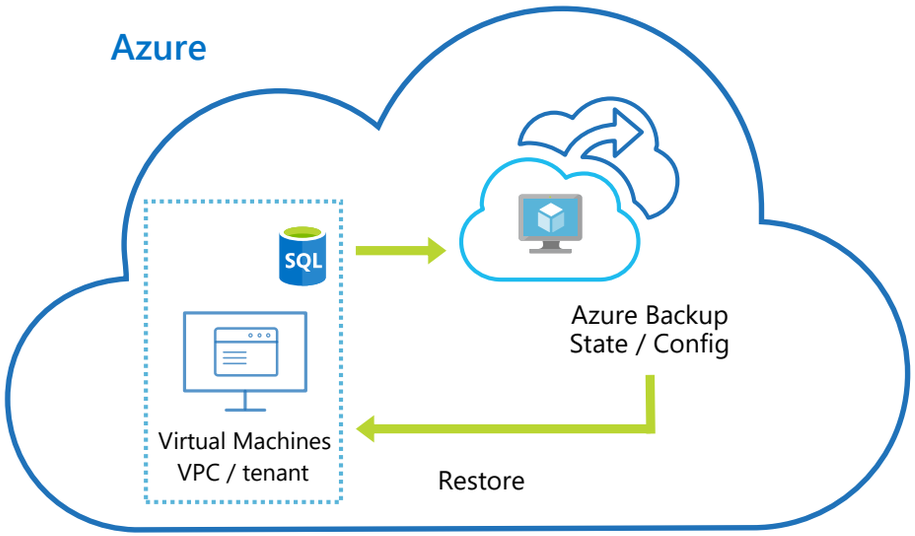
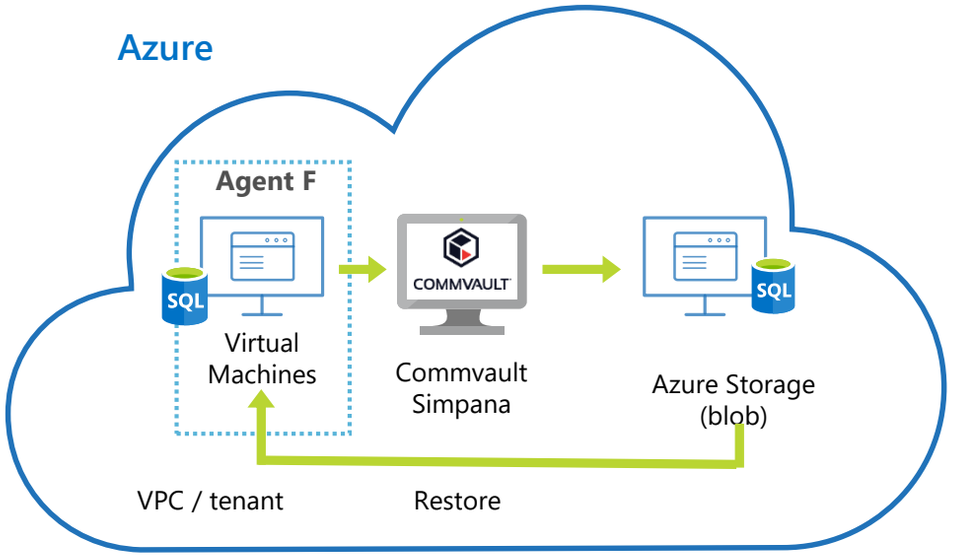
Azure Backup

Simple and reliable cloud integrated backup as a service

- Secure and reliable backup as a service alternative to tape
- Integrated with GUIs of Windows Server Backup or System Center Data Protection Manager.
- Supports images, files, Exchange, SQL, and SharePoint.



Option 1 – Use native Azure Backup



Option 2 – Use 3rd party backup apps

Business Continuity

Via Azure Site Recovery

- Get your business back up and running in minutes with near-zero data loss
- Use Azure as your DR site
- Automated VM protection & replication
- Remote health monitoring
- Customizable recovery plans
- No-impact recovery plan testing
- Orchestrated recovery of tiered applications
