

# Modernize deployment with Windows Autopilot

Goodbye, time-consuming device setup.  
Hello, Windows Autopilot!

With Windows Autopilot and your trusted technology partner, transitioning your employees to new, personalized Windows 10 Pro devices has never been faster or easier.

## How does Windows Autopilot work?

A company purchases and registers Windows 10 Pro devices for deployment with Windows Autopilot.

The company's Microsoft partner creates and assigns setup and configuration profiles for the company's employees.

The employees receive and unbox their new devices, connect to the internet, and sign in.

Their settings and apps are seamlessly downloaded. Your Microsoft partner then handles ongoing device management.

### A huge business impact

*"The process of configuring and provisioning devices for new hires and other employees was reduced from 25 minutes to just seconds using Autopilot."*

- Forrester

## LEARN HOW QUALIFYING AUTOPILOT DEPLOYMENTS COULD BE FREE!

Up to a \$16 per unit value (3 different Autopilot SKUs available, up to White Glove Service); requires minimum purchase of 10 Windows PCs.

Promo is valid now through June 30, 2022.

Reduce the complexity of setting up new devices
