

Exceed your customers' expectations with SYNNEX White Glove Device Enrollment. With this unique service, the SYNNEX Integration Center enrolls customers' or end users' devices into their Google Management consoles with full OS updates.

The result? End users can immediately use their devices upon arrival, greatly reducing the workload of your onsite technical team and improving the overall end-user experience.

Key things to know about White Glove Device Enrollment:

- An adequate number of Google licenses must be posted in the Management Console prior to the start of enrollment.
- It is important to include the administrator's username and password when submitting an order to your SYNNEX sales rep.
- The console must be set up and the Wi-Fi console settings already established prior to device enrollment at the SYNNEX Integration Center.
- The first-time set-up of the console and Wi-Fi settings are not included as part of the White Glove Device Enrollment service.

Remember to add these key services:

- Through SERVICESolv, we offer a first-time set-up service which includes console set-up and Wi-Fi console settings/set-up. Ask your SYNNEX sales rep for more information.
- You must order Gaylord/Green Packaging in conjunction with at least one of the other White Glove services listed here.
- Assigning individual OUs is not part of basic White Glove service. We can provide this service for an additional fee.

In addition to White Glove Device Enrollment, SYNNEX Integration also offers asset tagging, etching, reporting and multi-pack for laptops. Customers may furnish their own asset tags or we can create custom asset tags.

Ask about our volume pricing.
